

Whole Latte Love

Brew pressure adjustment

Note: Before making any adjustments make sure the machine is not plugged in and that there is no power going to the unit.

1. Loosen lock nut with 14mm open end wrench.
2. Use a 10mm open end wrench to turn adjustment screw. Turn it clockwise facing the screw to raise the pressure.
3. When you have the pressure to where you want it hold the adjustment screw in place while tightening the lock nut to keep the adjustment screw from turning.

Note: Check pump pressure with blind filter basket. Set the pressure to about 9.5 to get 9 bar during a normal brew cycle, give or take a little. It will vary depending on incoming line pressure.

Note: The OPV is just a safety valve and has nothing to do with the brew pressure.

Brew Pressure Adjustment Screw (10mm)

Lock nut (14mm)
