

Silvia High Limit Reset Instructions

The following instructions are designed to make the reset of Silvia high limit switch quick, easy and safe. Please read the entire instructions before you start.

1. Unplug the Silvia
2. Remove water tank.
3. Remove the four screws on the top cover.
4. Remove the top cover.
5. You will see two tan or blue thermostats on the top of the boiler. While facing the front of the Silvia, the one on the left with the red dot is the brew thermostat. The one on the right is the steam thermostat. The high limit switch is the small thermostat located to the left of the brew and steam thermostats, but not on top of the boiler. It is on the front side of the boiler and is usually hidden by some white plastic connectors. It has a very small red plunger in the center. Push this plunger inward a few times; to be sure it's reset. Use some care, the plunger is rather delicate; too heavy a hand will pull the plunger out of the body of the switch.
Note: This plunger won't click, pop, or disappear when pressed, but will still reset the switch. It won't feel as if you really pushed it in at all.
6. Screw the top cover on, install the reservoir and plug the unit back.
7. Turn the main power switch on and test it out.
